Overview

CPC504 is a CompactPCI PICMG 2.0 compliant host processor module based on low power dual-core Intel Core 2 Duo CPUs operating at 1.6 GHz or 2.2 GHz with 4 MB level 2 cache and featuring 800 MHz system bus. The processor executes up to 8 floating point operations per clock cycle and can address up to 4 GB of soldered DDR2 system memory in 64-bit mode.

An increased heatsink for CPU and chipset cooling with effective surface area of up to 682 cm² allows efficient heat dissipation within wide ambient air temperature range.

For high-speed data exchange CPC504 employs two Gigabit Ethernet channels, four x1 PCI Express lanes, and 32-bit PCI bus. The graphics controller of Intel 965GME supports output of two independent video streams to VGA and LVDS interfaces or to two DVI-D interfaces available on 8HP and 12HP modifications.

The firmware of CPC504 supports booting from LAN, from the onboard SD cards, from soldered 4 GB flash memory disk, or from SATA II (up to 300 MB/s) and IDE drives located on MIC584 mezzanine expansion module or on a rear I/O module.

The MIC584 mezzanine module supports two SATA II interfaces with option to mount either SATA DOM solid-state modules or one standard 1.8" SATA disk drive. Six COM ports, two USB 2.0, PS/2, and audio interfaces are available via the MIC584 module as well.

CPC504 supports Windows XP/XP Embedded, Linux, and QNX operating systems.
